

表示较弱：状态和动作混排，数值埋在操作框中

$$L(w) = \frac{1}{2}(w - 3)^2, \text{ 步长 } \eta = 0.5$$

改进表示：分开当前状态、更新输入与下一状态

$$w^{(t+1)} = w^{(t)} - \eta g^{(t)}$$

实线：参数值 赭橙虚线：梯度信号
